Azure vCPU Core Quota

View Current Quota

1. Log into the Azure console and navigate to the Subscriptions module and click Quotas. Next, select all providers in the providers drop-down, select show all in the far-right drop down and select the Azure region in which your Cloud Workspace is deployed.

2. Then you'll see how much you're consuming vs. how much quota you have available. In the image below, CloudJumper is consuming 42 CPUs out of the 350 CPUs available for the BS family of VMs.
Increasing Quota

You can use each Microsoft Azure resource up to its quota. Each subscription has separate quotas and usage is tracked per subscription. If you reach a quota cap, you can request an increase via Help + Support. [Learn more](#)
